

The Story Behind SIGNATURE

SIGNATURE

German Hand Craft

“The Ultimate Car Speaker System”

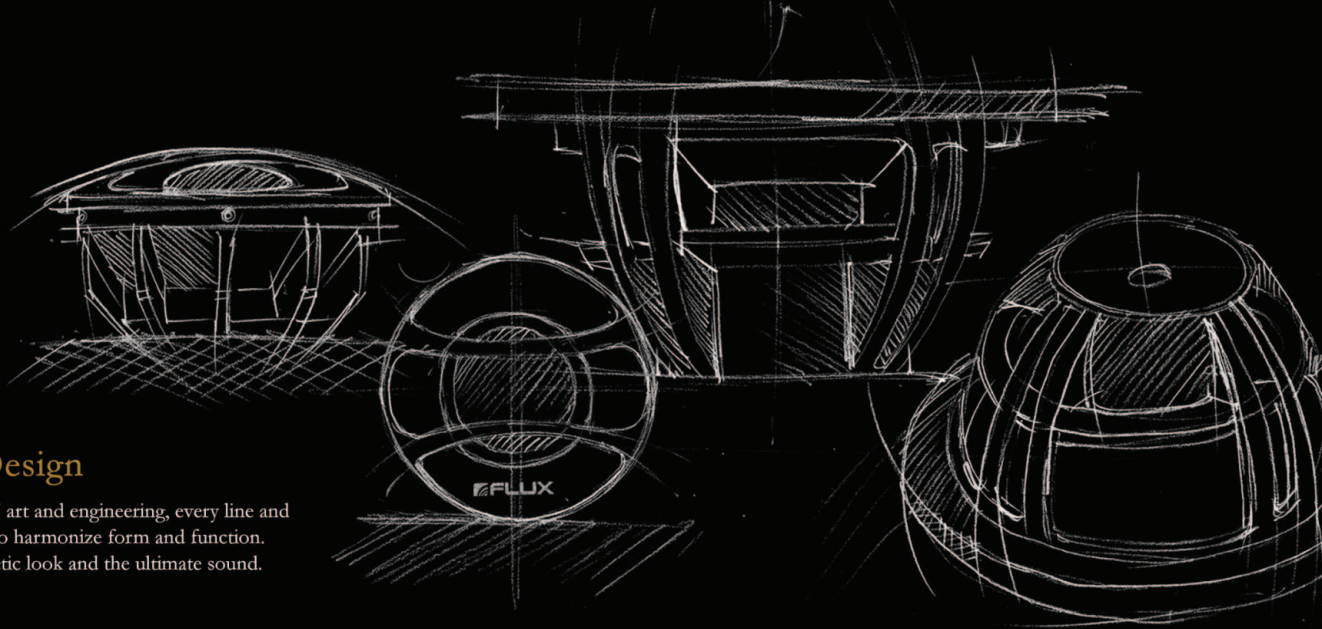

“Redefining Perfection” was the vision that inspired the creation of Signature. After years of constant research and development, Signature is finally here to turn the vision into reality. Offering audiophiles audio-quality that is completely out of this world.

Signature perfectly brings out every note and detail.

Timeless Design

The perfect blend of art and engineering, every line and curve was sketched to harmonize form and function. Delivering the aesthetic look and the ultimate sound.

German Craftsmanship

“SIGNATURE” was built in Germany, each piece carefully handcrafted to perfection. Combining advanced technology with expert craftsmanship in our cutting-edge German factory.

The Perfect Sound

Experience audio the way it was meant to be heard: Rich, Powerful, and Clear.

“SIGNATURE” brings out every note and detail perfectly, a testament to our expertise and attention to detail.

Unmatched Performance

The “SIGNATURE” raises the bar for high-end speakers, a masterpiece of audio engineering. Each piece handcrafted for power and precision, making “SIGNATURE” the benchmark for years to come.

SIGNATURE

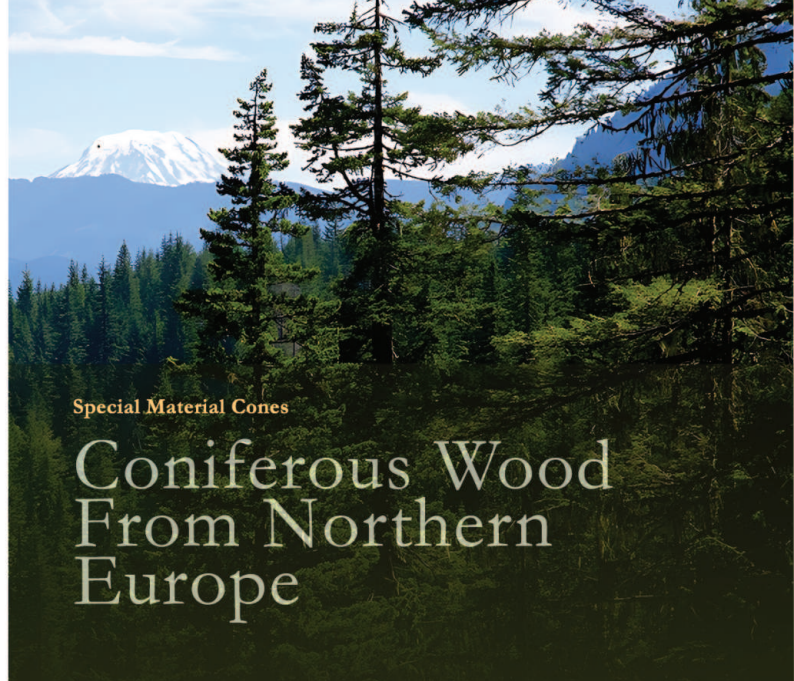

SIGNATURE

Special Cones Material

Signature has a cone made of non press paper-based Coniferous Wood from Northern Europe. Paper was chosen because it is lightweight, yet highly responsive to movement, producing a clear and natural sound. The material is processed through special coating techniques to increase its strength and resistance to moisture and high temperatures inside the car cabin.

SIGNATURE

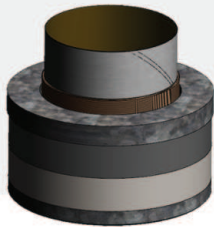

Alumunium Die Cast Basket

The basket or speaker frame is designed with high quality die cast aluminum that is strong and lightweight, and equipped with air vents to reduce overheating. The basket is precision engineered to minimize internal resonances that can cause sound distortion. With its exclusive basket design, Signature can deliver deeper bass and more accurate punches.

SIGNATURE

Neodymium Magnet

The utilization of neodymium magnets provides greater magnetic strength. This enables faster and more precise sound response, especially for low and mid frequencies. The strong magnets also play an important role in maintaining sound stability at various volume levels.

SIGNATURE

Superior Tweeter

The Signature tweeter uses a silk dome material designed to perfectly reproduce high frequencies. The tweeter is capable of capturing fine sound details, providing an outstanding sensation of clarity and fidelity. With its large power handling capability, it also produces a wider dynamic range of sound.

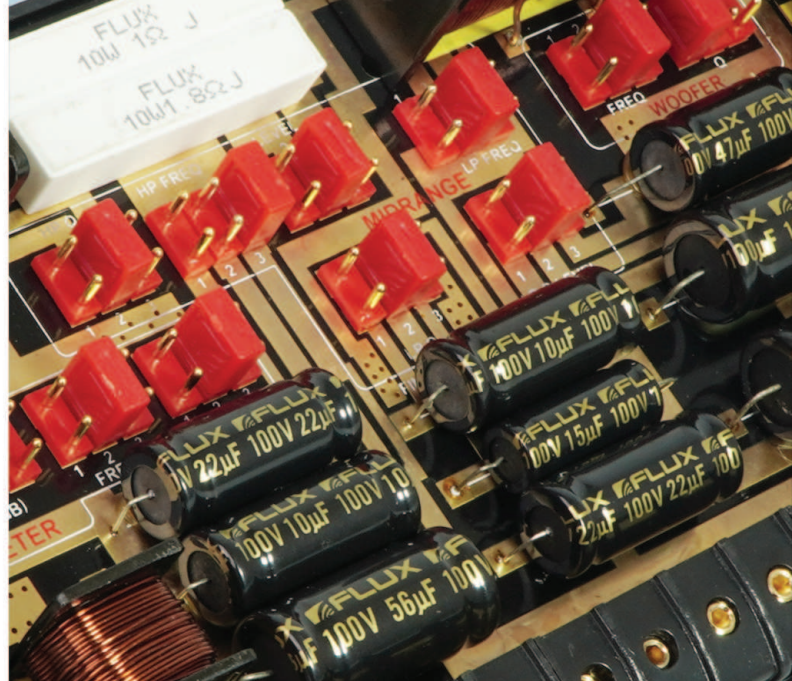

SIGNATURE

Precise Passive Crossover

The Signature is equipped with a precision-engineered passive crossover. This crossover component is responsible for dividing the low, mid, and high frequencies to the appropriate drivers without any frequency mix-ups that could reduce the sound quality. With high-quality materials, the crossover ensures that the sound is produced with perfect harmonies across all frequencies.

Signature SR165

Driver Type	Woofer
Impedance	3 Ohm
Power Handling	100 Watt
Diameter Size	6.5 inch
Voice Coil Diameter	37 mm
Cone	Non Press Paper Based Coniferous Wood
Basket Masterial	Alumunium Die Cast
Surround	Butyl Rubber
Magnet	Neodymium

Signature SR80

Driver Type	Midrange
Impedance	3 Ohm
Power Handling	100 Watt
Diameter Size	3 inch
Voice Coil Diameter	25 mm
Cone	Non Press Paper Based Coniferous Wood
Basket Masterial	Alumunium Die Cast
Surround	Butyl Rubber
Magnet	Neodymium

Signature SR28

Driver Type	Tweeter
Impedance	3 Ohm
Power Handling	100 Watt
Voice Coil Diameter	28 mm
Dome	Special Coated Silk Dome
Case Material	Alumunium Die Cast
Magnet	Neodymium
